

AEROSPACE TECHNOLOGY

ADVANCED SPACE EXPERIMENT PROCESSOR (ADSEP)

PRODUCT DESCRIPTION

The Redwire Advanced Space Experiment Processor (ADSEP) is a fully automated, multi-use single middeck locker processing facility used to conduct a variety of life and physical-science research and small-batch production. The ADSEP facility contains three independent thermal zones, each accommodating one "mini-laboratory" cassette, and an internal computer that controls the processing of all three cassettes. Each cassette housing is designed to provide up to 2-levels of containment for each experiment, which allows for experiments that are an HRL-2. The facility is agnostic to the content of the cassettes. Therefore, completely independent studies can be run in different cassettes simultaneously. The cassettes are "hot swappable", enabling crews to successfully run disparate experiments back-to-back.

APPLICATIONS

- + Fluid Processing
 - C-elegans research.
 - Bacteria research.
 - Squid research.
 - Uniform biopharmaceutical crystallization.

MARKETS SERVED

- + Human Tissue Research.
- + Human Tissue Manufacturing.

- + Separations
 - Biphasic separation.
 - Microencapsulation.

+ University studies of microbes.

+ Cell Dynamics Cell culturing.

Manufacturing.

+ On-Orbit Servicing, Assembly &

Redwire make no warranty, representation or guarantee regarding the suiability of tips products for any particular purpose, nor does Redwire assume any liability arising out of the application or use of any produce or circuit, and specifically disclaimsany and all liability, including without limitation special, consequencial, or incidental damages. "Typical" parameters including "Typicals" must be validated for eachcostumer application by cutomer's technical experts. Redwire does not convey any license under it patent rights nor the rights of others. Redwire products are not designed, intended, or authorized for use as componets in systemsor any other applicacion in which the failureof the Redwire product could create a situation where personal injury or death may occur. Should Buyer purchaseor use Redwire products for any such intended or unauthorized application, Buyer shall indemnify and hold Redwire and its officers, employees, subsidiaries, affiliates, and distributors harmless againts all claims, cost, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, anyclaimof personal injury or death associated with such intended or unauthorized use, even if such claim alleges that Redwire was negligent regarding the design or manufacture of the part. Redwire is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not resale in any manner.

PARAMETERS

- + Three independent processing modules can each be programmed for totally automated operation.
- + Processing temperature (4 40° C) can be independently monitored and controlled in each of three modules.
- + Accommodates up to three cassettes, each capable of processing biological samples in space.
- + Biological samples are loaded (preflight) into cassettes that provide appropriate levels of containment, up to HRL-2.
- + Near Realtime download capabilities of facility data.

OTHER FEATURES

Typical ADSEP workflow:

- + Work with the investigators to define experiment requirements and hardware layout.
- + With the investigators input, create an optimum experiment utilizing existing hardware or building new hardware to fit the experimenter's needs.
- + Provide flight-equivalent hardware to the investigator's laboratory months before launch for ground research and experiment design and finalization.
- + Perform Experiment Verification Tests to prove experimenter's objectives are met in hardware.
- + Work with the investigator(s) at the launch site to assemble the flight hardware and arranging hand over (usually late loading) to launch officials.

MISSION HERITAGE

- + Space Shuttle Endeavour STS-77 and Space Shuttle Discovery STS-95.
- + SpaceX Cargo Dragon.+ Northrop Grumman Cygnus.
- + International Space Station EXPRESS Rack.

This product is export controlled. Contact Redwire for more information.

HERITAGE

Redwire is a new leader in mission critical space solutions and high reliability components for the next generation space economy. With decades of flight heritage combined with the agile and innovative culture of commercial space platform, Redwire is uniquely positioned to assist its customers in solving the complex challenges of the future space missions. For more information, please visit **www.redwirespace.com**

- + Processing module doors are opened with two thumb screws, allowing cassettes to be installed in, and removed from, each processing module on orbit.
- + Cassette interfaces with the processing module through blind-mating power/data connector on back side of cassette that can be hot swapped to allow for multiple cassettes to be processed per ISS increment.
- + Certified for power launch on Dragon allowing for experiments to be run enroute to the ISS such as the UMAMI experiment.
- + Direct all on orbit operations with the ISS crew using ground proven crew procedures.
- + Assist in traversing the path of manifesting an experiment on the ISS. We will complete paperwork and meet flight milestones to qualify the experiment for flight technically: meeting safety/containment requirements and attending all reviews.
- + Collect and return the payload during post-landing recovery operations.
- + Provide all on orbit data and environmental parameters
- + Perform ground control experiments utilizing flight hardware
